100% ecological

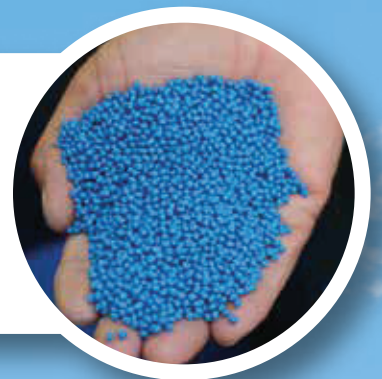

Ecological sorting

Most of our products are designed from a single material. This simplifies sorting and recycling the vast majority of our production scraps.

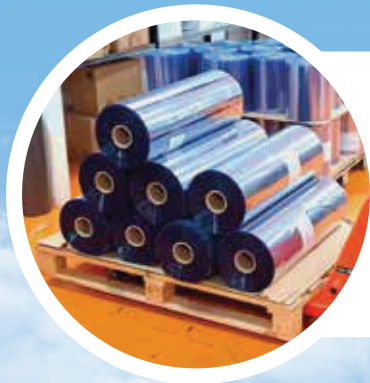

Transformation

Our partner collects our scraps to turn them into pellets. These will be melted down to be incorporated into a new material production.

Reuse

These new rollers of material are then used to make new products manufactured here at Olmiplast.

In addition to offering you products made from recycled materials, 40% of them come from inexhaustible mineral resources.

In summary

We sort

We recycle

We reuse
